

Ammonium sulfate

Features of ammonium sulfate

- Chemical formula : $(\text{NH}_4)_2\text{SO}_4$
- Molecular weight : 132.14

Ammonium sulfate is a typical nitrogen fertilizer that is hydrosoluble and fast-acting. We process it as a granular product to suppress the creation of powder dust.

Product name

- Product name : RA-20.5

Region of origin

Our products are produced consistently at our Chinese subsidiary, utilizing strict quality control.

Characteristics

- Grain : 4 to 2 mm
- Water content : 3% or less
- Granularity : 2.0 kg or greater
- Guaranteed composition(%) : Ammoniac nitrogen : 20.5

Applications

Nitrogen fertilizer, snow melting agent

Delivery formats

- Flexible containers(with internal bags) : 1000kg
- Other delivery formats also possible
