

Leaf mold (Soil preparation materials)

Leaf mold

Fallen leaves are collected between December and February in southern Vietnam, and then coarsely ground and exposed to open air to ferment. This is a deciduous leaf compost consisting mainly of cashew tree leaves. A system for year-round shipment has been established.

Delivery formats

- In 70-liter PP bags (approx. 24kg each)
- Import: approx. 1,000 bags / 40-ft sea shipment container
- When restored, about 130 to 140-liter

packaged

product

Efficacy

Improves the aeration, discharging, and water retention properties of soil, and softens soil.
